- Increasing/decreasing arrows (alt = “arrow pointing up” or “arrow pointing down”)	
Other Page Content: None	

Support Implications: this content will need consideration/update on the basis that policy changes come. This could come quickly or slowly, depending on the urgency of certain issues and how the government chooses to address the energy and agriculture industries.

Technical Considerations: AI chatbot feature will have to be trained on a dataset specialized for Brazilian regulations. This would likely be done using RAG (Retrieval Augmented Generation), which would use an external knowledge base maintained by the software specifically for Brazilian energy/agriculture governance. This platform would also have to communicate with ANP (Agencia Nacional de Petroleo) for target data, along with an ERP system (Enterprise resource planning), most likely something like SAP or Oracle, as these are very commonly used systems in Brazil.

2.0 AI Chatbot Feature

Audience: Sugarcane Production Plant Managers Purpose: Provide additional context and guidance on how to meet regulations Audience Questions: 1. I want a deeper dive into how my company is aligning with this regulation. How can we meet this specific regulation? 2. How can I trust the chatbot to provide verified, truthful information about these regulations?	Key words: Advice, Trust, Context Friendly URL: cana.co/chat
--	---

3. How might these regulations change in the future based on current news/events?	
Page Content (including title and alt tags): Chat box header: Regulatory Assistant - Subheader: Ask about legal codes and authorities Prompt: Try a quick question, with example questions loaded in for a user to pick if they aren't sure what to ask. Searchbar: field for user to type their own question or ask for additional context (Indicate subheaders in bold and links by <u>underlining</u>.)
